

**Ink Cups – general**

One of the most important components for achieving high quality padprint is the ink cup.

We manufacture ink cups that fit most of the printing machines on market, usually with a better execution. Examples: microPrint, Tampoprint, Tecaprint, Tosh, Morlock, etc.

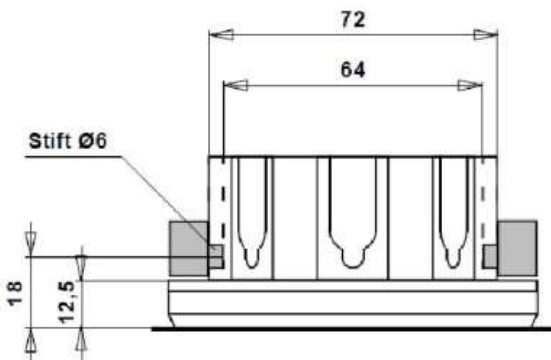

SICATECH has developed a series of ink cups with covered magnets around the edge and with ceramic or carbide rings. Also a series of oval cups with steel rings are available.

These series of ink cups can be assembled and adapted to all machines on the market.

**Ink Cups – general**

### SICATECH – Ink Cups

SICATECH has developed a series of ink cups with fully covered magnets around the edge and with ceramic or carbide rings.

The ink cups contain less ink than conventional ink cups and are very easy to clean. Available with large screw cap or viscomat connection (automatic thinning and viscosity control).

Also a series of oval cups with steel rings (uncovered magnets) is available.

These series of ink cups can be easily mounted and adapted to all machines on the market.
